

AURÉLIE VAN HOYE

From France to Sweden

Project: **Sport clubs and health promotions**

Research topic: **Sport**

Swedish Institution: **University of Örebro**

French Institution: **University of Lorraine**

Dates of mobility: **20/05/2019 to 25/05/2019**

Program: **SFVE-A (ex TOR)**

PRESENTATION

[Aurélie Van Hoyer](#) is an Associate Professor at [University of Lorraine](#), and a member of the [Public Health Laboratory APEMAC](#). Her research interests focus on supporting coaches and PE teacher in their role, especially regarding their health promotion activities and motivational climate, as well as through the study of health enhancing physical activity policy. Her recent work is on the development of an intervention for sport clubs to become health promoting setting, from intervention mapping to intervention implementation and evaluation ([PROSCeSS project](#)). She's also co-leading, with [Susanna Geidne](#), the [Sports Clubs for Health of the Health Enhancing Physical Activity](#) network of the [WHO Europe](#). Finally, she works on the evaluation of physical activity interventions, especially on the implementation process evaluation using mixed methods.

ACTIVITIES IN SWEDEN

Aurélie Van Hoyer's stay in Sweden was the opportunity to further develop a research cooperation between researchers established in the University of Lorraine and the [University of Örebro](#). This cooperation was already started by a previous SFVE-A (ex FRÖ) mobility program that helped to conduct a literature review on interventions to promote health within sport clubs. This collaboration was created in the framework of the expertise of the Erasmus+ project [Sport Clubs for Health](#) and the former [European Commission \(FP7 Health\) PAPA-project](#). The project's goals were to collect evidence-driven data within sport clubs, but also pilot test and validate measures of health promotion within sport clubs for officials, coaches, and athletes.

In the dynamics of the Sport Clubs for Health group of the [HEPA Europe](#) network, Aurélie Van Hoyer further developed the already existing collaboration between French and Swedish researchers. Thus, she collaborated with researchers established at the University of Örebro to better conceptualize mechanisms used by sports clubs to promote health.
