

Miriam TORRES-MIRALLES

From Finland to France

Project: Assessing the performance of High Nature Value (HNV) farming systems to support sustainable, healthy, and climate-neutral diets

Research topic: **Agronomy**

Finnish Institution: **University of Helsinki**

French Institution: **French National Institute for Agriculture, Food and Environment**

Dates of mobility: **01/03/2022 to 15/03/2022**

Program: **Maupertuis Programme**

PRESENTATION

[Miriam Torres-Miralles](#) is a PhD candidate in the Doctoral Programme of Interdisciplinary Environmental Sciences (DENVI) at the [University of Helsinki](#) and is also an active member of the [Helsinki Research Institute of Sustainability](#) (HELSUS). Her research focuses on extensive livestock production systems that combine environmental conservation. Her expertise in agroecology was honed during her master's degree at the [University of Barcelona](#). She has experience in research since 2014 when she participated in a public research project funding by the Spanish Ministry of Economy and Competitiveness in relation to the conservation of agricultural systems. Currently she is working on her PhD thesis that includes a collaborative network between 6 countries, researchers, farmers and other stakeholders.

ACTIVITIES IN FRANCE

The overall expected outcome is to produce a co-authored paper preliminarily entitled, "Assessing the performance of High Nature Value (HNV) farming systems to support sustainable, healthy, and climate-neutral diets", a paper which will contribute final deliverables for the completion of PhD requirements of Miriam and other PhD student, [Rachel Mazac](#). During her stay, Miriam met Dr. [Bertrand Dumont](#) and discussed on including possible collaborators to the plan. In the premises of [INRAE](#), she could initiate her work and finally get feedbacks and follow-up with the UH (Department of Agricultural Sciences).
